

AiGentsy Protocol Document

AiGentsy Licensing Guide

Overview:

This document outlines the open-use and licenseable aspects of the AiGentsy platform, focusing on user-facing agent systems, remix logic, and monetizable ventures.

Licensing Options:

- Remix IP License: Granted per Vault, inherited via Remix Tree
- Joint Venture License: Formed through MetaVentures, linked to protocol revenue share
- SDK/API Licensing: Governed by the Universal API Layer

Protocol Rights:

- Protocol logic remains sovereign
- Remixers and Venture initiators retain monetization rights
- AiGentsy reserves rights to security, staking, and inheritance enforcement

Notice:

All licensing pathways integrate with the protocol's internal stake/yield routing logic. Monetization does not equal ownership; ownership is always protocol-native and yield-governed.
