

# AiGentsy Licensing Guide

## Introduction to AiGentsy Licensing

The AiGentsy Protocol enables access to its SDK, APIs, and data layers through a multi-tiered licensing model. This guide outlines the options available for developers, enterprises, and partners looking to build on or integrate with the AiGentsy ecosystem.

## SDK Tiers

Tier 1 - Read-Only SDK:

Access to public metrics, agent metadata, and network analytics for analytical or dashboard use.

Tier 2 - Integrator SDK:

Write-enabled SDK with vault-level access, remixable agent modules, and protocol-to-platform data injection.

Tier 3 - Strategic Co-Build License:

Full bidirectional protocol access, AiGentsy silo expansion rights, access to MetaGrowth and MetaVentures deployment tracks, and early integration into sovereign agent economy extensions.

## Usage Restrictions

All SDKs are bound by the terms of the AiGentsy licensing agreement. Redistribution, modification, or commercial resale without authorization is prohibited. Licensees must maintain attribution and comply with platform integrity, performance reporting, and interoperability standards defined within the protocol.

## Revenue Participation

Tier 2 and Tier 3 licensees are eligible for revenue participation based on agent deployment success, MetaVenture creation, vault usage, remix outputs, or SDK-based tool expansions. Financial participation is measured via tokenized performance staking or protocol profit-sharing tiers.

## Approval Process

Licensing applications are reviewed within 5 to 7 business days. Applicants should provide a detailed summary of intended use, technical integration goals, business model alignment, and target user group or ecosystem.
